

Vina-GNINA agreement is strongly system-dependent

BACE1 canonical is the only exact rank-1 consensus case. $\alpha 7$ remains geometrically valid despite rank-2 selection; FYN and modeled alternates show larger ranking divergence.

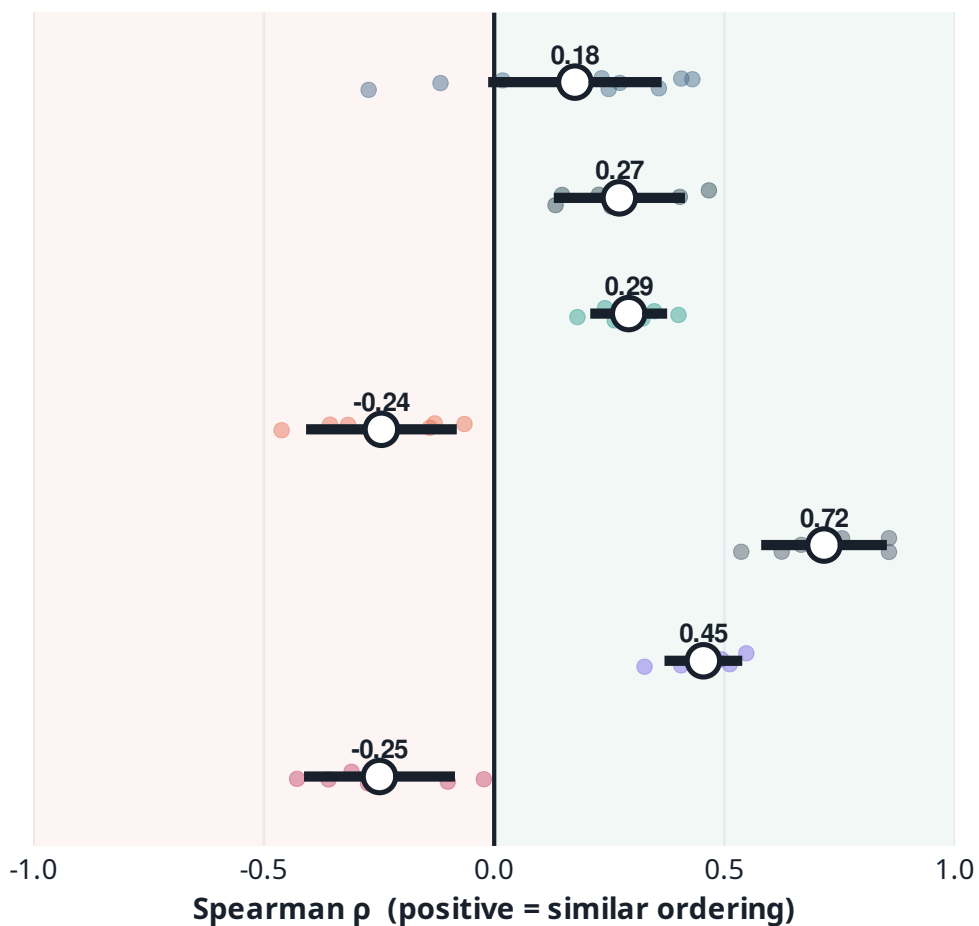

Pose chosen by CNNscore

Original rank within each Vina ensemble

Within-ensemble rank correlation

Vina pose quality versus CNNscore

Open circles show medians (left) or means (right); horizontal bars show IQRs or 95% t intervals. Correlation measures ranking similarity, not experimental accuracy.
