

KIT-masitinib provides a canonical baseline—not an isoform comparison

Experimental c-KIT template PDB 1T46 • nine independently seeded canonical-pocket runs

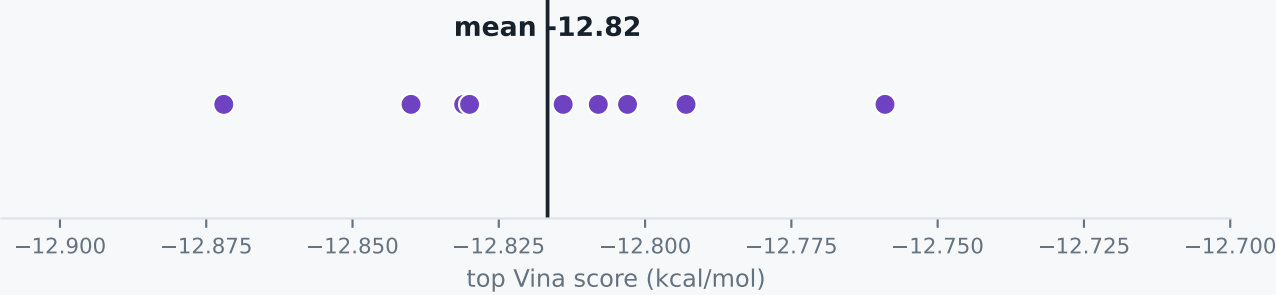

canonical c-KIT cartoon

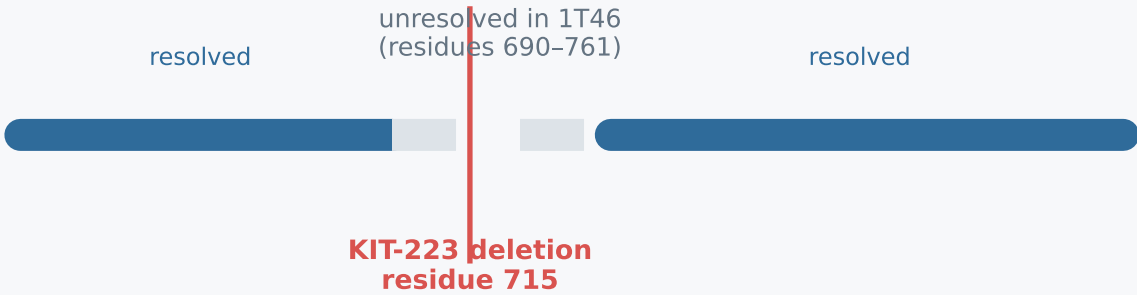

● docked masitinib

Canonical result is numerically reproducible

9 runs • SD 0.032 kcal/mol • range -12.872 to -12.759

Why no KIT-223 docking score is reported

A comparative score would depend on an unvalidated rebuilt loop model.

No KIT-223 score

The experimental structure does not cover the altered residue.

Interpretation: stable canonical baseline only; no claim about isoform-dependent affinity.
